PREMIUM SAFETY EYEWEAR

*bouton*<sup>®</sup>  
BY PIP

For over 60 years, Bouton<sup>®</sup> has built its name by developing safety glasses workers want to wear. By focusing on innovation and style, the Bouton<sup>®</sup> legacy continues to grow today.

REDISCOVER  
BOU TON<sup>®</sup>

# BOUTON® LENS TECHNOLOGIES

## FOGLESS<sup>3SIXTY</sup><sup>™</sup> TECHNOLOGY

When a rapid temperature change occurs, micro-water droplets in the air will collect on untreated lenses. FogLess<sup>®</sup> 3Sixty<sup>™</sup> applies a densely bonded dual-acting hydrophilic and hydrophobic lens coating that beads away water and moisture.

## IRSHADING<sup>™</sup> TECHNOLOGY

On jobsites where welding, grinding, or metal cutting takes place, infrared (IR) radiation poses a serious risk. Our IR-shaded lenses filter out intense light and heat, allowing workers to safely observe operations.

## MIRROR<sup>PLUSPRO</sup> POLARIZED<sup>™</sup> TECHNOLOGY

Ultimate filtering of scattered sunlight from smooth surfaces, like water and snow, by controlling the angle at which light enters the lens. The result is incredibly enhanced acuity and significantly higher contrast.

## I/O BLUE<sup>™</sup> TECHNOLOGY

Overexposure to blue light from screens has been known to cause eyestrain and fatigue. I/O blue lenses are uniquely coated to help filter out harsh blue light and enhance color contrast.

## MIRROR<sup>PLUSPRO</sup><sup>™</sup> TECHNOLOGY

Mirror Plus PRO<sup>™</sup> lens coatings take traditional Mirror Plus<sup>™</sup> and further enhance visibility by deflecting an increased amount of sunlight, and helping to reduce glare by up to 15% more than a traditional tinted lens.

## GRADIENT<sup>™</sup> TECHNOLOGY

High-powered overhead lights can cause glare that increases eye strain. Gradient lenses feature a slight mirror coating on the top portion of the lens, while the remainder of the lens remains clear.

## MIRROR<sup>PLUS</sup><sup>™</sup> TECHNOLOGY

Deflects sunlight from the wearer's eyes, delivering noticeably less glare and reflection than standard gray lenses. Anti-Reflective Plus<sup>™</sup> coating on the back of the lens significantly reduces light reflecting into the eye.

## ANTI-REFLECTIVE<sup>PLUS</sup><sup>™</sup> TECHNOLOGY

Anti-Reflective Plus<sup>™</sup> lenses allow an astounding 96% Visible Light Transmission (VLT) compared to the 88-90% VLT provided by standard clear lenses, resulting in improved acuity.
