

**THE ASSURANCE YOU NEED.**

CHEMICAL RESISTANT HAND PROTECTION

ASSURANCE BRAND OF PRODUCTS HAS BEEN DEVELOPED FOR CHEMICAL RESISTANT APPLICATIONS FOUND IN ALL TYPES OF INDUSTRIAL SETTINGS. THIS LINE BUILDS ON THE PIP VALUE PROPOSITION FOR "QUALITY, INTEGRITY AND SAFETY".

**QUALITY.** We've developed the Assurance line through careful evaluation of manufacturers in conjunction with the assistance of our quality assurance team. Like most of the PIP products, the Assurance line is produced in ISO certified factories embedded in the heart of the major raw material producing areas in Asia. These factories employ state of the art research and development processes in conjunction with carefully managed manufacturing techniques and closely monitored quality evaluations.

**INTEGRITY.** PIP has been a supplier of work gloves to industrial distribution for more than 28 years. Our entire supply network has been focused on the delivery of the best possible products at the best possible value. We will back up the Assurance Hand Protection line with the same promise of your satisfaction that we do on all of our products. Assurance Hand Protection will satisfy your needs or we'll take the product back.

**SAFETY.** Assurance Hand Protection has been designed with the utmost safety in mind. Chemical resistance test results are available on a wide variety of chemical families found commonly in the workplace. All of these gloves have been tested for durability as well. While these results are generated in a laboratory setting and we are highly confident of the ability to products to perform well "at work", you should also conduct your own testing to make certain that the gloves will withstand your applications.

***Assurance Hand Protection is made from component materials which comply with Federal regulations for food contact. 21CFR, 170-199***

A close-up photograph of a person's hands wearing bright yellow nitrile gloves. The person is pouring a thick, red, viscous liquid from a white plastic container into a clear glass jar. The jar is already partially filled with the same red liquid. The background is a blurred industrial or laboratory setting with a white tray and other containers.

QUALITY. INTEGRITY. SAFETY.
