# BEST PRACTICES FOR DONNING CLEANROOM FACE MASKS

## STEP 1

Thoroughly disinfect hands with antibacterial soap or alcohol solution before handling

## STEP 2

Make sure mask is covering mouth and nose at all times

## STEP 3

Create an airtight seal by contouring the mask to the nose and edges of the face

**When in a cleanroom environment, breathe in through the nose and out through the mouth.**  
*This breathing procedure helps protect the user and the environment by filtering stray particles through the nose and quickly releasing pressure when breathing outwards through the mouth.*
