

A close-up photograph of a person's hands wearing grey, textured nitrile work gloves. The person is working on a metal engine component, possibly a valve train, with various bolts and nuts visible. The background is blurred, showing a workshop or industrial setting. The PIP logo is prominently displayed in the upper right corner.

## FOAM NITRILE COATING

Nitrile is a popular glove coating due to its superior resistance to snags, cuts, punctures and abrasions. When enhanced by a foam finish, tiny suction-cup-like pockets absorb and disperse liquids on the gripping surface, making a great coating for dry, slightly wet and slightly oily surfaces.
